Profile Details | 1 Parameters

Fasting: Overnight Fasting for 9-12 hours | Report Time: Within 3 Days

**Specimen Required:** Blood

**Price-** ~~₹960~~ **₹450**

## Parameters Included

### About This Test

The HSV (Herpes Simplex Virus) I & II IgG test measures the presence of IgG antibodies against HSV types 1 and 2 in the blood. These antibodies indicate past exposure o infection with the virus, as IgG antibodies typically develop several weeks after initial infection and persist for life. This test helps determine whether a person has been infected with HSV-1 (commonly causing oral herpes) or HSV-2 (commonly causing genital herpes) in the past.
