CALCIUM/ CREATININE RATIO (URINE RANDOM)

Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: Next Day

Specimen Required: Urine

Price- ~~₹500~~ **₹295**

Parameters Included

About This Test

The calcium/creatinine ratio measures the amount of calcium in the urine relative to the amount of creatinine. This ratio is used to assess calcium excretion in the urine, which helps in evaluating calcium metabolism and diagnosing conditions related to abnormal calcium levels. A high calcium/creatinine ratio may indicate hypercalciuria, which can be associated with conditions like hyperparathyroidism, kidney stones, or certain bone diseases. Conversely, a low ratio may suggest issues such as hypocalciuria or problems with calcium absorption. This ratio is commonly used in the diagnosis and management of various metabolic and endocrine disorders.
