

AEC - ABSOLUTE EOSINOPHIL COUNT

Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: Same Day

Specimen Required: Blood

Price- ₹290 **₹150**

Parameters Included

About This Test

The Absolute Eosinophil Count (AEC) measures the number of eosinophils, a type of white blood cell, present in a specific volume of blood. Eosinophils are involved in the body's immune response, particularly in combating parasitic infections and in allergic reactions. Here's what the AEC can indicate: - **Elevated Levels:** High eosinophil counts may suggest allergic reactions (such as asthma or eczema), parasitic infections, autoimmune diseases, or certain types of cancers like leukemia. - **Low Levels:** Reduced eosinophil counts are less common but can occur in conditions such as Cushing's syndrome or as a result of certain medications. The AEC is used to help diagnose and monitor conditions related to immune system dysfunction and to evaluate the effectiveness of treatments for such conditions.
