About This Test

An allergy to Aspergillus fumigatus test measures the level of specific Immunoglobulin E (IgE) antibodies in the blood that react to the Aspergillus fumigatus fungus. Elevated IgE levels indicate an allergic sensitization to this fungus, which can cause respiratory issues such as allergic bronchopulmonary aspergillosis (ABPA) or exacerbate asthma. The test helps diagnose and manage allergic reactions to Aspergillus fumigatus by identifying sensitization and guiding appropriate treatment to reduce symptoms and improve respiratory health.
