

ALP-ALKALINE PHOSPHATASE

Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: Same Day

Specimen Required: Blood

Price- ₹380 **₹150**

Parameters Included

About This Test

Alkaline phosphatase (ALP) is an enzyme found in various tissues throughout the body, with high concentrations in the liver, bile ducts, bones, and placenta. The ALP test measures the level of this enzyme in the blood. Elevated or decreased levels of ALP can indicate various health conditions. 1. **Elevated ALP Levels:** - **Liver Disease:** Conditions such as hepatitis, cirrhosis, liver cancer, or bile duct obstruction can cause high ALP levels. - **Bone Disorders:** Diseases like Paget's disease, osteomalacia, or bone tumors can lead to increased ALP levels. - **Other Conditions:** Pregnancy, hyperparathyroidism, and certain infections can also raise ALP levels. 2. **Decreased ALP Levels:** - **Nutritional Deficiencies:** Conditions like malnutrition or certain vitamin deficiencies can result in low ALP levels. - **Genetic Disorders:** Rare inherited conditions can lead to decreased ALP production. The ALP test helps diagnose and monitor these conditions, guiding appropriate treatment strategies.
