About This Test

Postprandial insulin (insulin PP) refers to the measurement of insulin levels in the bloodstream following a meal. It reflects the body's response to glucose intake and helps evaluate insulin secretion and sensitivity in response to food consumption. Elevated postprandial insulin levels can indicate insulin resistance, where cells do not adequately respond to insulin's signals to take up glucose, leading to higher blood sugar levels. This test is crucial in assessing metabolic health, particularly in diagnosing conditions like type 2 diabetes and guiding treatment strategies aimed at managing blood sugar levels effectively throughout the day.

98% On-Time Reports	**100% Sample Accuracy**	**Free Home Collection**	**Expert Doctors**	**750+ Lab Tests**
Available 24×7	NABL Certified Labs	Door-to-Door Pickup	Across India	Trusted & Reliable

**Fasting 10–12 hrs essential | *Limited Period Offer | *Reports within Same day*
