

# ANTI SCL-70 ANTIBODY

Profile Details | 1 Parameters

Fasting: Overnight fasting for 9-12 hours | Report Time: Within 5 Days

**Specimen Required:** Blood

Price- ₹2600 **₹1599**

## Parameters Included

### About This Test

An **anti-Scl-70 antibody** test measures the presence of antibodies against Scl-70, also known as topoisomerase I, which is an enzyme involved in DNA replication and repair. Here's what this test assesses: 1. **Systemic Sclerosis (Scleroderma)**: Anti-Scl-70 antibodies are commonly associated with diffuse systemic sclerosis (scleroderma), a type of connective tissue disease characterized by skin thickening and organ involvement. Their presence supports the diagnosis of this condition. 2. **Autoimmune Disorders**: Helps diagnose systemic sclerosis and differentiate it from other autoimmune disorders with overlapping symptoms. 3. **Disease Monitoring**: Can be used to monitor disease activity and progression in patients with systemic sclerosis. 4. **Prognostic Indicator**: The presence and levels of anti-Scl-70 antibodies may provide information about the severity and prognosis of systemic sclerosis. In summary, the anti-Scl-70 antibody test measures antibodies against topoisomerase I to aid in the diagnosis, monitoring, and prognosis of systemic sclerosis and related autoimmune disorders.
