T4 - TOTAL THYROXINE

Profile Details | 1 Parameters

Fasting: Overnight fasting for 9-12 hours | Report Time: Same day

Specimen Required: Blood

Price- ~~₹299~~ **₹199**

Parameters Included

About This Test

A thyroxine (T4) test measures the level of thyroxine hormone in the blood. Thyroxine, also known as T4, is one of the two main hormones produced by the thyroid gland, the other being triiodothyronine (T3). T4 plays a crucial role in regulating the body's metabolism, influencing processes such as heart rate, body temperature, and energy production. - **High T4 levels** can indicate hyperthyroidism, where the thyroid gland is overactive, leading to symptoms such as weight loss, rapid heartbeat, and nervousness. - **Low T4 levels** may suggest hypothyroidism, where the thyroid gland is underactive, causing symptoms like weight gain, fatigue, and cold intolerance. The T4 test is essential in diagnosing thyroid disorders and monitoring thyroid function. It helps healthcare providers assess whether the thyroid gland is producing the right amount of hormones to maintain metabolic balance and overall health.
