About This Test

The C-ANCA PR3 test measures the presence of anti-proteinase 3 (PR3) antibodies in the blood. These antibodies target PR3, an enzyme found in neutrophils, and are associated with certain autoimmune diseases, particularly vasculitis conditions like Wegener's granulomatosis and microscopic polyangiitis. The test helps diagnose these conditions by detecting these specific antibodies, indicating immune system activity against the body's own tissues. It also aids in monitoring disease activity and treatment effectiveness.
