

CHLORIDE- CL

Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: Same Day

Specimen Required: Blood

Price- ₹250 **₹140**

Parameters Included

About This Test

A chloride test measures the concentration of chloride, an essential electrolyte, in the blood or urine. Chloride plays a crucial role in maintaining fluid balance, regulating acid-base levels, and supporting nerve and muscle function. It works with sodium and potassium to manage blood volume, pressure, and pH balance. Abnormal chloride levels can indicate health issues such as dehydration, kidney disease, metabolic acidosis (high levels), or prolonged vomiting and metabolic alkalosis (low levels).
