About This Test

A DHEA (Dehydroepiandrosterone) test measures the level of DHEA sulfate (DHEA-S) in the blood. DHEA is a hormone produced by the adrenal glands, playing a key role in the production of male and female sex hormones, including testosterone and estrogen. The test helps evaluate adrenal gland function and diagnose conditions related to hormone imbalances, such as adrenal tumors, adrenal insufficiency, and polycystic ovary syndrome (PCOS). It is also used to monitor patients with these conditions.
