

DIRECT COOMBS TEST - DCT

Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: Within 2 Days

Specimen Required: Blood

Price- ₹699 **₹499**

Parameters Included

About This Test

A DCT (Direct Coombs Test) measures the presence of antibodies bound to red blood cells. This test, also known as the direct antiglobulin test, involves adding anti-human globulin (Coombs reagent) to a blood sample to detect if antibodies or complement proteins are attached to the red blood cells. It is used to diagnose conditions such as hemolytic anemia, autoimmune disorders, and transfusion reactions, helping identify causes of red blood cell destruction.
