

DSDNA - ANTI DOUBLE STANDARD DNA - IFA

Profile Details | 1 Parameters

Fasting: Overnight fasting for 9-12 hours | Report Time: Within 4 Days

Specimen Required: Blood

Price- ₹3000 **₹1675**

Parameters Included

About This Test

A dsDNA (double-stranded DNA) test measures the levels of antibodies against double-stranded DNA in the blood. Elevated levels of these antibodies are commonly associated with autoimmune diseases, particularly systemic lupus erythematosus (SLE). This test helps in diagnosing and monitoring SLE and assessing disease activity. High dsDNA antibody levels can indicate active disease or flares, while low levels may suggest disease remission or less activity. It is used alongside other tests to evaluate autoimmune conditions.
