About This Test

****Fasting Blood Sugar (FBS)**** and ****Postprandial Blood Sugar (PPBS)**** are tests used to measure blood glucose levels to evaluate how well the body manages sugar. - ****Fasting Blood Sugar (FBS)****: Measures blood glucose after fasting for at least 8-12 hours. It assesses baseline glucose levels and helps diagnose diabetes or prediabetes. Elevated FBS indicates potential glucose metabolism issues. - ****Postprandial Blood Sugar (PPBS)****: Measures blood glucose two hours after eating. It evaluates the body's ability to process and regulate glucose following a meal. Elevated PPBS levels can indicate insulin resistance or diabetes. Together, these tests help diagnose, manage, and monitor diabetes and glucose-related disorders.
