

FEVER PANEL 1

Profile Details | 5 Parameters

Fasting: Fasting is not mandatory | Report Time: Same Day

Specimen Required: Blood, Urine

Price- ₹750 **₹550**

Parameters Included

- CBC
- ESR - Erythrocyte Sedimentation Rate
- Widal
- Urine R/M or Urine Analysis
- MP

About This Test

A fever is a temporary rise in body temperature, often due to an illness. It is the body's natural response to infections, as part of the immune system's effort to fight off invading pathogens like bacteria or viruses. A normal body temperature averages around 98.6°F (37°C), but a fever typically begins at 100.4°F (38°C) or higher. Fever can also be caused by non-infectious conditions, such as inflammatory diseases or heat exhaustion. Common symptoms accompanying fever include sweating, chills, headache, muscle aches, and fatigue. While usually not harmful, prolonged or very high fevers require medical attention.
