

FEVER PANEL 4

Profile Details | 7 Parameters

Fasting: Fasting is not mandatory | Report Time: Same Day

Specimen Required: Blood, Urine

Price- ₹2100 **₹1399**

Parameters Included

- CBC
- Urine R/M or Urine Analysis
- ESR - Erythrocyte Sedimentation Rate
- Widal
- Malaria
- TYPHOID
- DENGUE NS1

About This Test

A fever is a temporary elevation in body temperature, usually caused by the immune system's response to an infection or illness. It's a natural defense mechanism that helps the body fight off bacteria, viruses, or other pathogens. Normal body temperature is around 98.6°F (37°C), and a fever is typically defined as a temperature of 100.4°F (38°C) or higher. Fever can also result from non-infectious causes such as inflammatory conditions, heat exhaustion, or reactions to medications. Symptoms of accompanying fever include chills, sweating, headache, muscle aches, and fatigue. While most fevers are not dangerous, extremely high or persistent fevers may require medical attention.
