About This Test

A filaria antigen test measures the presence of specific antigens produced by filarial parasites, such as *Wuchereria bancrofti* or *Brugia malayi*, in the blood. These parasites cause lymphatic filariasis, which can lead to severe lymphatic system damage and swelling. By detecting these antigens, the test helps diagnose active filarial infections, assess the extent of the disease, and guide appropriate treatment. It is especially useful in areas where filariasis is endemic and for managing the disease in affected individuals.
