About This Test

The GAD 65 antibody test measures the presence of antibodies against glutamic acid decarboxylase (GAD), specifically the 65-kDa isoform. GAD is an enzyme involved in insulin production in pancreatic beta cells. Elevated levels of GAD 65 antibodies are commonly associated with autoimmune diabetes, such as Type 1 diabetes, where the immune system attacks and destroys beta cells in the pancreas. This test helps in diagnosing autoimmune diabetes and differentiating it from other forms of diabetes.
