

HSCRP , HIGH SENSITIVITY C- REACTIVE PROTEIN

Profile Details | 1 Parameters

Fasting: Fasting not required | Report Time: Same day

Specimen Required: Blood

Price- ₹999 **₹499**

Parameters Included

About This Test

High-sensitivity C-reactive protein (hsCRP) is a marker of inflammation in the body, specifically used to assess low-grade inflammation associated with cardiovascular disease and other chronic conditions. It is a sensitive biomarker that can detect subtle changes in inflammation levels, helping to predict cardiovascular risk beyond traditional risk factors like cholesterol levels. hsCRP testing is performed using a blood sample and is particularly useful in stratifying cardiovascular risk in individuals with intermediate risk profiles. Elevated hsCRP levels may indicate increased risk for heart attacks, strokes, and other cardiovascular events, prompting interventions such as lifestyle changes and medications to mitigate risk.
