

INSULIN -FASTING

Profile Details | 1 Parameters

Fasting: Overnight fasting in 9-12 hours | Report Time: Same day

Specimen Required: Blood

Price- ₹899 **₹499**

Parameters Included

About This Test

Fasting insulin is a blood test that measures the level of insulin in the blood after a period of fasting, typically overnight. Insulin is a hormone produced by the pancreas that regulates blood sugar levels by facilitating the uptake of glucose into cells for energy or storage. Elevated fasting insulin levels can indicate insulin resistance, a condition where cells become less responsive to insulin, leading to higher blood sugar levels. This test helps diagnose conditions like type 2 diabetes and metabolic syndrome, guiding healthcare providers in assessing insulin sensitivity and developing appropriate treatment strategies to manage blood sugar levels effectively.
