

KARYOTYPING (CHROMOSOME ANALYSIS)

Profile Details | 1 Parameters

Fasting: Overnight fasting for 9-12 hours | Report Time: Within 18 Days

Specimen Required: Blood

Price- ₹5200 **₹2870**

Parameters Included

About This Test

A karyotyping test analyzes the number and structure of chromosomes in cells to detect genetic abnormalities. It involves arranging and photographing chromosomes from a cell sample, typically blood, bone marrow, or amniotic fluid. Karyotyping helps diagnose genetic disorders, congenital anomalies, and certain cancers by identifying chromosomal changes like deletions, duplications, translocations, or extra chromosomes, such as in Down syndrome. The test provides valuable information for genetic counseling, guiding treatment decisions, and understanding hereditary conditions.
