About This Test

The LKM-1 (Liver Kidney Microsomal antibody type 1) test measures the presence of specific autoantibodies in the blood targeting liver and kidney cells. Elevated LKM-1 antibody levels are primarily associated with autoimmune hepatitis type 2, an autoimmune liver disease. This test aids in diagnosing autoimmune hepatitis, differentiating it from other liver disorders, and guiding appropriate treatment strategies. The presence of LKM-1 antibodies indicates an immune system attack on liver cells, leading to inflammation and liver damage. Accurate measurement is crucial for effective diagnosis and management of the disease.
