

MALARIA PARASITE SLIDE (MP SLIDE)

Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: Same day

Specimen Required: Blood

Price- ₹299 **₹149**

Parameters Included

About This Test

The malaria parasite slide test, or microscopic examination, is a traditional method for diagnosing malaria. It involves collecting a blood sample, usually via finger prick, and spreading it on a glass slide to create a blood smear. The smear is stained using Giemsa or other specific stains, which highlight the malaria parasites within red blood cells. A trained laboratory technician then examines the stained smear under a microscope to identify and quantify the presence of malaria parasites. This method is considered the gold standard for malaria diagnosis due to its high sensitivity and specificity. It allows for the identification of the malaria species and the determination of parasite density, which are crucial for appropriate treatment and monitoring. However, it requires skilled personnel and proper laboratory facilities.
