About This Test

The Parietal Cell Antibody (PCA) test is a blood test that detects antibodies against the parietal cells lining the stomach. These cells produce intrinsic factor, essential for vitamin B12 absorption. The presence of these antibodies is associated with autoimmune conditions like autoimmune gastritis and pernicious anemia. Elevated PCA levels indicate that the immune system is attacking the stomach lining, potentially leading to vitamin B12 deficiency. This test helps diagnose these conditions, allowing doctors to develop appropriate treatment plans to manage symptoms and prevent complications.
