Price- ₹599 **₹249**

Parameters Included

About This Test

A peripheral blood smear (PBS) measures and evaluates the characteristics of blood cells under a microscope. It provides detailed information about the size, shape, and appearance of red blood cells, white blood cells, and platelets. This test helps diagnose and monitor various conditions, including anemia, infections, and blood disorders like leukemia. By identifying abnormalities in blood cell morphology, a PBS can guide further diagnostic testing and inform treatment decisions, contributing to accurate and effective medical care.
