

QUADRUPLE MARKER - MATERNAL SCREEN 4

Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: Within 3 Days

Specimen Required: Blood

Price- ₹3500 **₹1850**

Parameters Included

About This Test

The quadruple marker test is a prenatal screening test that measures four specific biomarkers in the maternal blood to assess the risk of fetal chromosomal abnormalities and neural tube defects. These biomarkers typically include alpha-fetoprotein (AFP), human chorionic gonadotropin (hCG), estriol (uE3), and inhibin A. By evaluating the levels of these markers, the test helps estimate the risk of conditions such as Down syndrome, trisomy 18, and neural tube defects, providing information to guide further diagnostic testing.
