About This Test

Bicarbonate (HCO_3^-) is a key component of the body's buffering system that helps maintain the pH balance in the blood. Measuring bicarbonate levels provides insight into the body's acid-base balance and can help diagnose conditions related to metabolic acidosis or alkalosis. Low bicarbonate levels may indicate conditions like kidney disease or lactic acidosis, while high levels can be associated with metabolic alkalosis or chronic respiratory issues. This test is crucial for assessing overall metabolic health and managing electrolyte imbalances.
