

THYROID PROFILE ADVANCE

Profile Details | 4 Parameters

Fasting: overnight fasting for 9-12 hours | Report Time: Same Day

Specimen Required: Blood

Price- ₹1900 **₹999**

Parameters Included

- TSH - THYROID STIMULATING HORMONE
- PTH-Intact Parathyroid Hormone
- Total Triiodothyronine-T3
- T4 - Total Thyroxine

About This Test

A "TFT with PTH" refers to a diagnostic panel that includes Thyroid Function Tests (TFTs) and Parathyroid Hormone (PTH) measurements. TFTs assess thyroid gland performance by measuring hormones such as Thyroxine (T4), Triiodothyronine (T3), and Thyroid-Stimulating Hormone (TSH). These tests help diagnose thyroid disorders, such as hyperthyroidism or hypothyroidism, and evaluate overall thyroid function. PTH levels are measured to assess parathyroid gland activity, which is crucial for regulating calcium and phosphate balance in the body. Abnormal PTH levels can indicate parathyroid dysfunction, which may contribute to conditions like hyperparathyroidism or hypoparathyroidism. Combining these tests provides a comprehensive view of endocrine health, as thyroid and parathyroid glands interact in maintaining metabolic and calcium homeostasis. This combined approach helps in diagnosing and managing conditions related to thyroid and parathyroid imbalances.
