

TIBC TOTAL - IRON BINDING CAPAY

Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: Same Day

Specimen Required: Blood

Price- ₹400 **₹210**

Parameters Included

About This Test

Total Iron-Binding Capacity (TIBC) measures the blood's ability to bind and transport iron. It assesses how much iron can be carried by transferrin, a protein that binds iron in the bloodstream. TIBC is useful for diagnosing and managing iron-related conditions: - **High TIBC levels** can indicate iron deficiency anemia, where there's a shortage of iron available for binding. - **Low TIBC levels** can suggest iron overload conditions such as hemochromatosis or anemia of chronic disease, where the body has more iron than normal or the iron-binding capacity is reduced due to chronic illness. The TIBC test helps evaluate overall iron metabolism and is often used alongside other tests such as serum iron and ferritin, to provide a comprehensive view of iron status and related health conditions.
