

TOTAL PROTEIN- PROTEIN

Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: Same Day

Specimen Required: Blood

Price- ₹350 **₹145**

Parameters Included

About This Test

A protein measurement typically assesses the total amount of protein in the blood or a specific type of protein within the blood. This can provide insights into overall health and various bodily functions. 1. **Total Protein**: This measures the combined levels of all proteins in the blood, including albumin and globulins. It helps evaluate liver and kidney function, nutritional status, and the presence of conditions such as liver disease, kidney disease, and malnutrition. 2. **Specific Proteins**: Tests can measure specific proteins like albumin, which maintains blood volume and pressure, or specific antibodies or enzymes to diagnose particular conditions. 3. **Protein Electrophoresis**: This technique separates proteins based on their size and charge to detect abnormalities in protein levels or types, which can help diagnose conditions like multiple myeloma or other immune disorders.
