

TROPONIN- I QUANTITATIVE

Profile Details | 1 Parameters

Fasting: Fasting is not Mandatory | Report Time: Within 2 Days

Specimen Required: Blood

Price- ₹2800 **₹1490**

Parameters Included

About This Test

Troponin I measures the level of troponin I protein in the blood, which is released when heart muscle cells are damaged. It is a key biomarker for myocardial injury, commonly used to diagnose heart attacks and other acute coronary conditions. Elevated troponin I levels indicate damage to the heart muscle, helping clinicians assess the severity of the injury, monitor the progression of cardiac conditions, and guide treatment strategies. This test is specific to cardiac muscle damage.
