About This Test

A vitamin D3 test measures the level of 25-hydroxyvitamin D (25(OH)D) in the blood, which is the primary circulating form of vitamin D and a good indicator of overall vitamin D status. Vitamin D3, also known as cholecalciferol, is produced in the skin in response to sunlight exposure and can also be obtained from dietary sources and supplements. Adequate levels of vitamin D3 are essential for calcium absorption and bone health, supporting immune function, and reducing inflammation. Low levels of vitamin D3 can lead to bone disorders such as rickets in children and osteomalacia or osteoporosis in adults. High levels, although rare, can result in toxicity, leading to hypercalcemia and associated health issues. The vitamin D3 test helps diagnose and monitor vitamin D deficiency, guiding appropriate supplementation and treatment to maintain optimal health and prevent bone-related diseases.
