ANA (ELISA) - ANTI NUCLEAR ANTIBODIES

Profile Details | 1 Parameters

Fasting: Overnight fasting for 9-12 hours \mid Report Time: Within 3 Days

Specimen Required: Blood

Price- ₹699 **₹430**

Parameters Included

About This Test

The ANA ELISA (Antinuclear Antibody Enzyme-Linked Immunosorbent Assay) test measures the level of antinuclear antibodies (ANAs) in the blood. ANAs are antibodies the target the body's own nuclear components. The test uses an enzyme-linked reaction to detect and quantify these antibodies. Elevated ANA levels can suggest autoimmun disorders such as systemic lupus erythematosus (SLE) or rheumatoid arthritis. The ANA ELISA test provides a quantitative measure of these antibodies, helping to assess the presence and extent of autoimmune activity.
