ANTI PHOSPHOLIPID ANTIBODY /APL- IGM

Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: Next Day

Specimen Required: Blood

Price- ₹1200 ₹590

Parameters Included

About This Test

Anti-phospholipid antibodies (IgM) measure the presence of immunoglobulin M (IgM) antibodies that target phospholipids, which are essential components of cell membranes. These antibodies can interfere with normal blood clotting processes. Elevated levels of anti-phospholipid IgM antibodies are associated with antiphospholipid syndrome (APS), an autoimmune disorder that increases the risk of blood clots, pregnancy complications (such as recurrent miscarriages), and other vascular issues. The test helps diagnose APS and evaluate the risk of clotting disorders, especially in individuals with unexplained thrombotic events or recurrent pregnancy loss.
