About This Test

ASCA (Anti-Saccharomyces cerevisiae antibodies) IgG and IgA tests measure the levels of antibodies against Saccharomyces cerevisiae, a yeast used in baking and brewing. Elevated ASCA IgG and IgA levels are often associated with Crohn's disease, an inflammatory bowel condition. ASCA IgG and IgA tests help in diagnosing Crohn's disease and differentiating it from other inflammatory bowel diseases like ulcerative colitis. These tests are used alongside other diagnostic methods to assess and manage gastrointestinal conditions.
