CGA- CHROMOGRANIN

Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: Within 9 Days

Specimen Required: Blood

Price- ₹10000 ₹6990

Parameters Included

About This Test

A Chromogranin A (CgA) test measures the concentration of chromogranin A in the blood, a protein secreted by neuroendocrine cells. Elevated levels of CgA can indicate neuroendocrine tumors, such as pheochromocytoma, neuroblastoma, or carcinoid tumors. The test is used to help diagnose these tumors, monitor their progression, and evaluate treatment effectiveness. CgA levels can also be elevated in other conditions like gastrin-secreting tumors or chronic kidney disease, so results are interpreted within a broader clinical context.
