

# CMV-IGM - CYTOMEGALO VIRUS

Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: Next Day

**Specimen Required:** Blood

Price- ₹699 **₹395**

## Parameters Included

### About This Test

A CMV IgM (Cytomegalovirus Immunoglobulin M) test measures the presence of IgM antibodies specific to cytomegalovirus (CMV) in the blood. The presence of IgM antibodies indicates a recent or current CMV infection. This test is particularly useful for diagnosing acute CMV infections, especially in pregnant women, organ transplant recipients, and immunocompromised individuals, as a recent CMV infection can lead to serious health complications in these populations.
