

CRP- C- REACTIVE PROTEIN (QUANTITATIVE)

Profile Details | 1 Parameters

Fasting: Fasting not mandatory | Report Time: Same day

Specimen Required: Blood

Price- ₹799 **₹499**

Parameters Included

About This Test

C-reactive protein (CRP) is a substance produced by the liver in response to inflammation. A CRP test measures the levels of this protein in the blood, serving as a marker for acute and chronic inflammation in the body. CRP is a non-specific marker used to detect inflammation caused by infections, tissue injury, autoimmune disorders, or other inflammatory conditions. When there is inflammation in the body, CRP levels rise rapidly. The test is valuable in diagnosing and monitoring conditions such as rheumatoid arthritis, lupus, and inflammatory bowel disease. It can also indicate infections, cardiovascular disease risk, and post-surgical recovery progress. CRP levels can be elevated even in the absence of symptoms, making it a useful tool for identifying underlying inflammation. Tracking CRP over time helps healthcare providers assess the effectiveness of treatments and the progression of diseases.
