

D- DIMER QUANTITATIVE

Profile Details | 1 Parameters

Fasting: Overnight fasting for 9-12 hours | Report Time: Same Day

Specimen Required: Blood

Price- ₹2500 **₹999**

Parameters Included

About This Test

The **D-dimer test** measures the level of D-dimer, a protein fragment produced when a blood clot dissolves. Elevated D-dimer levels indicate significant clot formation and breakdown in the body. It is used to help diagnose conditions like deep vein thrombosis (DVT), pulmonary embolism (PE), and disseminated intravascular coagulation (DIC). A negative D-dimer test can help rule out these conditions, while a positive test may require further diagnostic imaging to confirm the presence of a clot.
