About This Test

FT3 (Free Triiodothyronine) and FT4 (Free Thyroxine) are thyroid hormones circulating freely in the bloodstream. They regulate metabolism, growth, and energy levels. TSH (Thyroid-Stimulating Hormone) is produced by the pituitary gland to stimulate thyroid hormone production. High TSH suggests hypothyroidism (underactive thyroid), while low TSH indicates hyperthyroidism (overactive thyroid). FT3 and FT4 levels help diagnose and monitor thyroid disorders, guiding treatment adjustments to maintain hormone balance and overall health.
