Profile Details | 1 Parameters

Fasting: Overnight fasting for 9-12 hours | Report Time: Same Day

Specimen Required: Blood

Price- ₹500 ₹290

## **Parameters Included**

## **About This Test**

In a glucose tolerance test (GTT), the 4th sample typically refers to a blood sample taken at the 2-hour mark after the patient has consumed a glucose solution. The test i used to assess how well the body processes glucose over time. Here's the general procedure for a 4-hour GTT: 1. \*\*Fasting Sample\*\*: Blood is drawn after fasting overnight. 2. \*\*Glucose Consumption\*\*: The patient drinks a glucose solution. 3. \*\*1st Hour Sample\*\*: Blood is drawn 1 hour after drinking the glucose solution. 4. \*\*2nd Hour Sample\*\*: Blood is drawn 2 hours after drinking the glucose solution. 5. \*\*3rd Hour Sample\*\*: Blood is drawn 3 hours after drinking the glucose solution (if a 4-hour test is conducted). The results of these samples help evaluate how effectively the body regulates blood sugar levels and diagnose conditions like diabetes or insulin resistance.
