## **HCV IGG**

Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: Within 3 Days

Specimen Required: Blood

Price- ₹1600 ₹950

## **Parameters Included**

## **About This Test**

HCV IgG is a blood test that measures the presence of immunoglobulin G (IgG) antibodies against the hepatitis C virus (HCV). The detection of HCV IgG indicates past or ongoing infection with hepatitis C. Unlike IgM antibodies, which indicate a recent or acute infection, IgG antibodies are typically present in chronic or past infections. This test is used to diagnose hepatitis C, determine if an individual has been exposed to the virus, and help guide further diagnostic and treatment decisions.
