Profile Details | 1 Parameters

Fasting: Overnight Fasting for 9-12 hours | Report Time: Within 3 Days

Specimen Required: Blood

Price- ₹960 **₹450**

Parameters Included

About This Test

The HSV (Herpes Simplex Virus) I & II IgG test measures the presence of IgG antibodies against HSV types 1 and 2 in the blood. These antibodies indicate past exposure of infection with the virus, as IgG antibodies typically develop several weeks after initial infection and persist for life. This test helps determine whether a person has been infected with HSV-1 (commonly causing oral herpes) or HSV-2 (commonly causing genital herpes) in the past.
