## **INDIRECT COOMBS TEST-IDCT**

Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: Within 2 Days

Specimen Required: Blood

Price- ₹699 **₹499** 

## **Parameters Included**

## **About This Test**

An IDCT (Indirect Coombs Test), also known as the indirect antiglobulin test, measures the presence of antibodies against red blood cells in the blood serum. This test involves mixing a patient's serum with red blood cells of known antigenic profiles and then adding anti-human globulin (Coombs reagent). Agglutination indicates that antibodies in the serum are binding to the red blood cells. The IDCT is used to screen for antibodies in blood transfusion compatibility testing and in diagnosing conditions like hemolytic disease of the newborn.
