## **LDH- LACTATE DEHYDROGENASE**

Profile Details | 1 Parameters

Fasting: Fasting not mandatory | Report Time: Same day

Specimen Required: Blood

Price- ₹599 **₹399** 

## **Parameters Included**

## **About This Test**

Lactate dehydrogenase (LDH) is an enzyme found in many tissues of the body, including the heart, liver, kidneys, muscles, and red blood cells. It plays a crucial role in cellular metabolism by catalyzing the conversion of lactate to pyruvate and vice versa, depending on the metabolic needs of the cell. LDH levels in the blood are measure to assess tissue damage or disease. Elevated LDH levels may indicate tissue injury, such as from heart attacks, liver disease, muscle damage, or certain cancers. LDH testing is often included in diagnostic panels to help identify and monitor various medical conditions affecting multiple organ systems.
