

RUBELLA VIRUS- GERMAN MEASLES-IGG ANTIBODIES

Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: Same day

Specimen Required: Blood

Price- ₹999 **₹399**

Parameters Included

About This Test

Rubella virus (German measles) IgG antibodies are proteins produced by the immune system in response to the Rubella virus. A Rubella IgG antibodies test measures the presence and concentration of these specific antibodies in the blood. - **Immunity Status**: High levels of Rubella IgG antibodies indicate immunity to Rubella virus either through vaccination or past infection. This immunity generally protects against future Rubella infections. - **Diagnostic Tool**: The test helps confirm previous Rubella infection or vaccination status. It is particularly useful in assessing immunity in pregnant women to prevent congenital Rubella syndrome in newborns. - **Monitoring**: Rubella IgG antibodies can persist in the bloodstream for years after infection or vaccination, providing long-term immunity status. This test is essential for public health efforts, vaccination programs, and prenatal care to ensure adequate protection against Rubella virus and its potential complications.
