

SERUM TESTOSTERONE POOLED SAMPLES- 20 MINUTES APART

Profile Details | 1 Parameters

Fasting: Overnight fasting for 9-12 hours | Report Time: Same Day

Specimen Required: Blood

Price- ₹1900 **₹880**

Parameters Included

About This Test

****Testosterone pooled from 3 samples**** refers to the practice of collecting three separate blood samples over a period of time and then combining (or pooling) them to measure the average testosterone level. This method aims to provide a more accurate representation of a person's testosterone levels, accounting for daily fluctuations and variations. ****Key Points:**** - ****Purpose:**** Pooled sampling helps mitigate the effect of diurnal variations and short-term fluctuations in testosterone levels, leading to a more stable and reliable measurement. - ****Clinical Relevance:**** It is particularly useful in assessing conditions related to testosterone deficiency or excess, such as hypogonadism, polycystic ovary syndrome (PCOS), or monitoring testosterone replacement therapy. - ****Diagnostic Use:**** By pooling samples, healthcare providers obtain a more accurate baseline testosterone level, which aids in diagnosing hormonal imbalances and tailoring appropriate treatment plans. This approach enhances the accuracy of testosterone measurement, providing a comprehensive understanding of an individual's hormonal status.
