TRIGLYCERIDES

Profile Details | 1 Parameters

Fasting: Overnight fasting for 9-12 hours | Report Time: Same Day

Specimen Required: Blood

Price- ₹360 **₹140**

Parameters Included

About This Test

A triglycerides test measures the level of triglycerides in the blood, which are a type of fat (lipid). Elevated triglyceride levels can indicate an increased risk of cardiovascular disease, pancreatitis, and metabolic disorders. High levels often result from excess calorie consumption, obesity, uncontrolled diabetes, excessive alcohol intake, or genetic conditions. Monitoring triglycerides helps assess heart health and guide lifestyle or medical interventions to reduce the risk of heart disease and other related conditions.
