About This Test

A tissue transglutaminase IgA (TTG-IgA) test measures the level of IgA antibodies against tissue transglutaminase in the blood. Elevated levels indicate an immune response to gluten, commonly seen in celiac disease. The test helps diagnose celiac disease by identifying this specific immune reaction, which leads to damage in the small intestine's lining. It is often used alongside other diagnostic methods, such as a biopsy, to confirm the presence of celiac disease and guide appropriate treatment.
