TYPHI DOT-IGG

Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: Same Day

Specimen Required: Blood

Price- ₹500 ₹280

Parameters Included

About This Test

The Typhi Dot IgG test measures the presence of IgG antibodies against *Salmonella Typhi*, the bacterium responsible for typhoid fever. This test is used to diagnose typhoid fever, particularly in chronic or convalescent stages, as IgG antibodies indicate a past or ongoing infection. Elevated levels of IgG antibodies suggest exposure to *Salmonella Typhi* and help in confirming the diagnosis of typhoid fever, which is characterized by symptoms like prolonged fever, abdominal pain, and gastrointestinal disturbances.
